Entertainment Presentation

The World of Television Shows

*Exploring Entertainment, Stories, and
Audience Experience*

Presented By: **Kutshemba Chauke**

Dataset Overview

This dataset contains user viewing activity across multiple channels, including demographic and behavioural attributes such as gender, age, province, channel and viewing time.

Total Users

The data set contains a total of 5736 Unique users, representing individual viewers on the platform

Total Sessions

The dataset records a total number of 10000 viewing sessions, indicating the numbers of times content was accessed.

Gender split

Male 87%
female 10%
Unknown Gender 3%

Top 5 Most Watched Channels

The top 5 most watched channels are dominated by sports and entertainment content, with SuperSport Live Events, ICC Cricket World Cup, and Channel O ranking highest. SuperSport Blitz and Trace TV also contribute significantly to overall viewership.

Other channels outside the top 5 show lower engagement levels, indicating that users have a stronger preference for live sports and entertainment-based programming compared to news or less interactive content.

Viewership Split by Gender

Male Users dominate viewership at 87%, while female users account for 10%, and unknown users 3%, indicating a strong male-skewed audience

Viewership Split by Province

Gauteng(37%) has the most viewership , making it the dominant province in terms of audience engagement.

Mid-level Contributions are observed from provinces such as **KZN (10%)** , **Mpumalanga (9%)**, and **Limpopo(8%)**, indicating moderate engagement across this regions.

Northern Cape Shows the lowest level of viewership. This suggests that audience engagement is unevenly distributed across the country, with lower activity in less populated or less connected regions.

Viewership Split by Race

The data shows that **Black** users represent the largest share of viewership, followed by smaller proportions of **Coloured**, **Indian**, and **Asian users**.

This indicates that the platform's primary audience is dominated by Black users.

Viewership Split by Time of Day

Afternoon Viewers(12:00 pm – 5:00 pm)

Viewership is highest during the afternoon period

Evening Viewers (6:00 pm – 11:00 pm)

Followed by the evening

Morning Viewers(5:00 am – 11:00 am)

Morning Sessions shows lower engagement

Midnight Viewers(00:00 am – 04:00 am)

Midnight records the least activity / viewers

3 734 Users

3 344 Users

2 455 Users

467 Users

This suggests that users are most active during daytime and after-work-hours

Viewership split by Age Groups

Youth (20– 35 years)

The majority of viewers fall within the youth category (57%)

Adults (36 – 55 years)

followed by adults at 33%.

Teenagers (13 –19 years)

Teenagers account for a smaller proportion at approximately 4–6%, while elderly users represent only 2% of total viewership.

This shows that the platform is mainly used by younger, economically active users, with very limited engagement from older audiences.

Conclusions & Recommendations

 Programs	 Viewers	 Recommendations
Sports content is the most watched	Majority are Black male users, especially youth and adults living in the Gauteng Province	Focus on expanding sports content and live events to maintain high engagement
Entertainment and music channels also perform well	Popular among younger audiences (18–30 years)	Increase youth-focused entertainment content to grow engagement
Peak viewing times	Highest activity in Gauteng and during afternoon / evening	Schedule key shows during peak times and target high performing regions
Audience distribution	Male users dominate, with fewer female and users with unknown genders	Develop content that appeals more to female audiences to balance viewership

Thank you
so much
